Purified Environments Launches Health-First Solutions for Millions Impacted by Mold-Contaminated Buildings

California company raises a health flag warning for homeowners, renters and landlords

Goleta, California – Mold isn't just unsightly or inconvenient—it's making people sick. As mold-related health concerns grow, Purified Environments is leading the way with advanced, science-based services that don't just fix properties—they help people feel better in their homes and workplaces.

Understanding the Health Risks of Mold Exposure

The science is clear: mold and other indoor contamination due to water damage isn't just unpleasant—it's dangerous.

- An estimated 25% of people are genetically predisposed to mold-related illness, including Chronic Inflammatory Response Syndrome (CIRS).
- 12% of the population experiences allergic reactions to mold—including rashes, congestion, chronic fatigue, brain fog, and respiratory issues.
- Prolonged exposure to toxic mold (mycotoxins) has been linked to neurological damage and chronic inflammation.

A Science-Led Mission to Improve Public Health

Founder Skip Jankoski brings a unique blend of biotechnology, healthcare, and technical expertise to the mold industry. As a Senior Trainer and member of the President's Council for NORMI (National Organization of Remediators and Microbial Inspectors), he's helping raise national standards and reframe mold remediation as a critical public health issue.

"We're at a turning point," says Jankoski. "Science, innovation, healthcare and public awareness are finally aligning—and we have a responsibility to act. This work isn't just about walls and ceilings. It's about how people feel in their own homes and communities."

In a recently published article, Jankoski urged the industry to shift toward evidence-based remediation, calling for widespread education and the use of advanced diagnostics, protocols, and technologies to reverse mold and microbial contamination, delivering safer, cleaner, healthier environments that support wellness and recovery.

“We’ve seen it time and again—when people receive effective remediation and advanced decontamination of their indoor environments, they begin to feel better,” says Jankoski. “This work truly changes lives.”

Skip Jankoski: Available for Expert Commentary

Skip Jankoski is the Owner and President of Purified Environments. A nationally recognized leader in indoor environmental decontamination and air quality management, he serves on the President’s Council for NORMI and is a Senior Trainer, helping guide the next generation of mold and air quality professionals. He holds multiple certifications and brings over a decade of industry experience grounded in scientific and healthcare-based approaches.

As an industry leader and educator, Skip Jankoski is available as a media expert for interviews and articles on topics including:

- The hidden dangers of indoor mold and how it affects human health
- Why mold should be considered a public health issue—not just a home maintenance problem
- The connection between indoor air quality and chronic respiratory illnesses
- How to detect and prevent mold growth in homes and commercial buildings
- The impact of climate change on mold prevalence and indoor air quality
- Mold remediation myths vs. facts: What homeowners need to know
- How mold exposure affects children, the elderly, and individuals with weakened immune systems
- The latest scientific advancements in mold remediation and air purification
- Why traditional mold removal methods often fail—and what truly works
- The importance of professional mold inspection before buying or selling a home
- How landlords and property managers should address tenant concerns about mold and indoor air quality

Serving communities across California’s Central Coast—including Santa Barbara, Ventura, and San Luis Obispo Counties—Purified Environments offers expert mold remediation, indoor air quality testing, air purification, and decontamination services designed to protect and restore healthy living conditions.
